

Energy Saver

Take control of your energy bill

A low-cost lighting upgrade and reduced energy bills.

Mitchel, who lives with his young family, works in a family business, says since becoming a homeowner he's become more conscious of his bills.

He heard about the NSW government lighting replacement offer through a friend. "He mentioned he had it done at his place, so I started researching," he says.

A good deal with instant savings

Mitchell discovered that he could get all his halogen downlights replaced with energy efficient LEDs for just \$33.

"The cost and the power saving motivated me to do it," he says. "It was definitely a good deal. We've got a couple of kids and we're leaving lights on all the time."

He says with Sydney being such an expensive city, "every little bit helps".

"It was definitely a good deal. We've got a couple of kids and we're leaving lights on all the time."

Accessing the offer

He says the process of getting his lights installed was easy, especially as his lights and transformers were on an approved list.

Mitchell says he would definitely recommend people to change their lighting. "It has to save you money especially with an 8w LED versus a 40w halogen. It's all numbers," he says.

Aside from taking up the lighting replacement offer, he uses a remote control to turn off his television and lights when they aren't in use. He's also sealed draughts in the house and planted more trees in his garden to get more shade.
